Introduction

This is the 20th Annual Workforce Census of the Royal College of Obstetricians and Gynaecologists (RCOG). Those of you who are avid readers of this document will notice a number of major changes.

This report is much more up-to-date than previously possible – the data were collected between February 2010 and February 2011. To put this in perspective, the last report (the 19th) was published in June 2009 using data collected up to 14 May 2008.

To address the problems with the old census of lack of timeliness and problems with data submission, a Working Party was formed at the beginning of 2009. The first thing we decided was that we would forgo data collection for 2009 and instead focus on moving entirely to an online system for data collection. This was combined with a thorough review of the data that we would ask you to provide – in particular we have been able to avoid asking you for information that we can now access from other sources such as deanery information on trainees. We also went through the questions and ruthlessly culled anything we have traditionally asked just because it was interesting; unless it could be shown that the question was essential, out it went, often after quite a lot of discussion. This has led to a much simplified and shorter online form for completion. Most College Tutors have been fantastic at providing the information we need; a few have needed multiple reminders and fewer still have been corralled almost at gun-point by College Officers phoning up personally. The few remaining recidivists finally cracked in January and this means that with your fantastic support and help we now have the most complete Census ever.

More importantly, the wholesale ‘data cleansing’ has revealed that what we thought was a comprehensive census in 2009 was incomplete. The provisional data for this latest census were available in August 2010 and it was immediately clear that information was missing. Now we have what we believe is a complete census for the first time. This result has been a vindication of the College’s decision to overhaul completely its databases and mechanisms for data collection.

The College is enormously grateful to all of you who provide us with the information we need – it is absolutely essential for many reasons. It permits the College to keep a handle on all grades of staff and provides a phenomenal resource to enable discussion of workforce issues with the Department of Health (DH), the Centre for Workforce Intelligence (CfWI) and other Royal Colleges. The accuracy of any data that you submit is of paramount importance and we are very grateful for all the effort this requires.

Knowledge is power. Having a clear grasp of our present workforce is extremely useful when we are in negotiations with the DH. The College has the opportunity to negotiate with the CfWI and the Departments of Health in all four parts of the UK over numbers entering the specialty, but the control over the number of consultant posts created rests with local employers and the DH. However, the College makes sure that its voice is heard in trying to ensure that we have enough doctors to provide the service requirement while at the same time ensuring that trainees entering our specialty can have a realistic expectation of career progression. Many people reading this report may assume that the DH has a clear handle on the workforce; this is not the case. The DH very much looks to the College for advice on workforce and expects us to work closely with the experts in the CfWI, so the effort you put in by completing the census, and in other ways, provides the accurate data that we need. Together with all the hard work in Standards at the College we are able to make a strong case for providing the safe staffing required to look after the women in our care as we and they would wish.

This census document should be read in conjunction with *The Future Workforce in Obstetrics and Gynaecology*, written mainly by my predecessor David Richmond with help from Stephen Robson and others (www.rcog.org.uk/our-profession/good-practice/medical-workforce-census). I strongly recommend that all interested parties read this important document. David and his team have done a huge amount of work to calculate both the work that needs to be done within our specialty and best estimates of the size and complexion of the workforce that will be needed to provide this. This document should be read in conjunction with *Standards for Maternity Care* (www.rcog.org.uk/womens-health/clinical-guidance/standards-maternity-care) and *Standards for Gynaecology* (www.rcog.org.uk/womens-health/clinical-guidance/standards-gynaecology) produced by the respective RCOG Working Parties.

Recruitment into our specialty has been excellent over the last few years, with all our training posts filled at ST1 level, and all of us are delighted with the calibre of trainees we are now attracting. It will therefore continue to be important that there is a realistic opportunity for trainees to progress to a consultant post. The ratio of trainees completing training and the number of consultant vacancies will not 'match' 1:1, but it will be less than honest if we do not do our best to try and avoid a significant oversupply of Certificate of Completion of Training (CCT) holders. Therefore, the number entering specialist training will need to be carefully adjusted; this of course is easier said than done because of all the variables involved.

Finally, many thanks to Matthew Huggins and his colleagues in the Postgraduate Training Department for their dedication and perseverance in helping to ensure the production of this document. Many other members of the College and its staff have also made huge contributions to this census.

John Latimer
RCOG Workforce Adviser
March 2011

The new process for collecting data for the Census

The 19th version of the RCOG Medical Workforce Annual Report (more commonly known as the census) was published in June 2009. It was based on data collected in May 2008, and it was this delay in production that initially led to a rethink of how the census data were collected. For many years the census had been paper-based. While the 2009 edition had been done online, it was felt that this could be further improved. A working group was set up to progress the census changes. The main task of the group was to consider the format of the census and the questions asked therein. The census content was considered in great detail, and eventually a new format and set of questions was agreed and approved. Working with Loopo (an IT company with whom the RCOG had worked closely when developing its successful 'ObsJobs' recruitment system), the census was designed and piloted in late 2009, to go live in early 2010.

It was agreed that the College Tutor at each hospital would be responsible for completion of the census, and so on 1 February 2010, logins and password were sent to the College Tutors, who had previously received guidance on how to complete the census. The nominal census date was 15 February 2010. There were some teething problems, but in general the feedback received was positive and the completed returns started rolling in.

However, the RCOG Officers were keen to get a 100% completion rate and therefore the census was open longer than initially anticipated. The final census return was submitted, with rather neat symmetry, on 1 February 2011. The report has since been produced very quickly, as it was all ready to go and was just awaiting the final data.

We would envisage the census returns being much more straightforward in the future, as the data entered on this occasion will be used to prepopulate and therefore should only have to be checked, rather than entered from scratch. We will also, of course, be looking at ways to simplify and streamline the process even further.

Matthew Huggins
Deputy Head of Postgraduate Training
March 2011

The Census and Comparative Information May 2011

Consultants

Consultant numbers have continued to increase. In this census there has been a fall in the number of vacant consultant positions from 101 to 45.

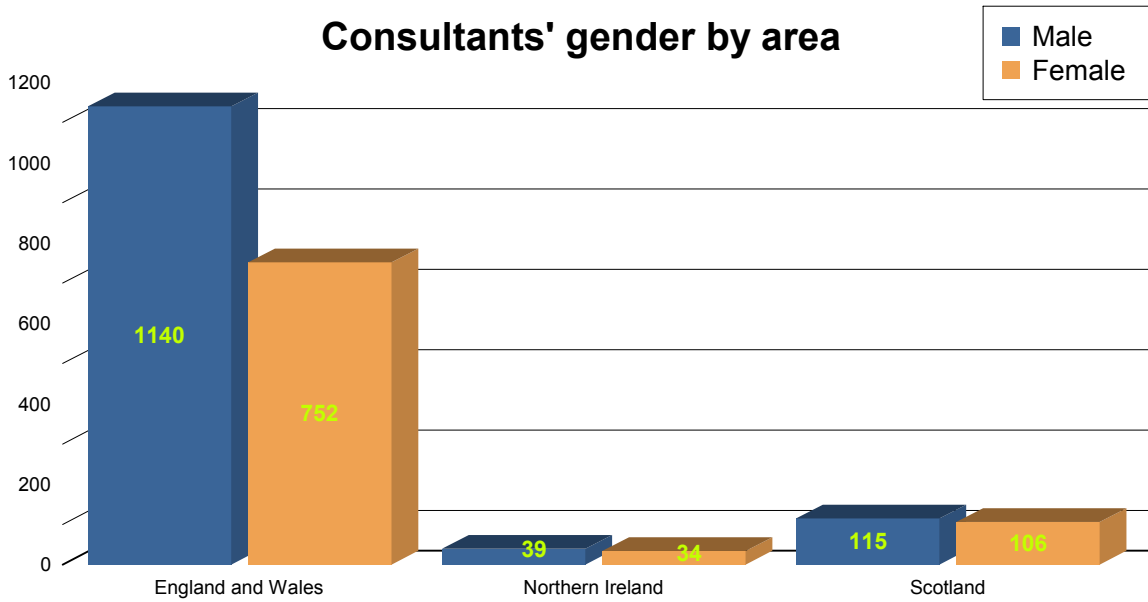

In the last census there were 1932 consultants in post together with 101 vacant posts, a total of 2033. In the current census there are 2186 consultants in post together with 45 vacant posts, a total of 2231.

There has therefore been an increase in consultants in post from 1932 to 2186, an increase of 254 or 13%. There has been an increase in the total number of consultant posts available (filled and vacant) to reach 2231 (compared with 2033 in 2009): this is an increase of 198 or 10%. This compares with the 2009's increase of 4.5%, although this 10% increase has of course occurred over a longer period of two to three years compared with the one year period of the previous census. Of consultants in post, approximately 60 are still filled by locum appointments, compared with 94 in the 2009 census.

The extra 254 consultants appointed between May 2008 and January 2011 is entirely consistent with our data from Advisory Appointment Committees which show that there were 119 additional consultants appointed in 2009 (together with 47 replacement posts and 15 'unsure' and 93 additional posts appointed in 2010 (together with 44 replacement posts) - i.e. a total of 212 new appointments during this period. Obviously there were other additional appointments from May to December 2008 and also in January and February 2011.

Subspecialty

The breakdown of subspecialty/special interests by consultant is shown in the following tables. Although these tables are useful in trying to identify the national service requirements this may not accurately reflect the number of colleagues practising in each of the recognised subspecialty disciplines. Much more information is available in the *The Future Workforce in Obstetrics and Gynaecology* document. We have now included specialists in sexual and reproductive health.

Specialty trainees in numbered training posts

This is the first year that we have just presented our Specialty Trainees (ST1 to ST7). Previously our census listed separately Specialist Registrars (SpR1 to SpR5) and SHOs - grades which have now been subsumed into one run-through training grade.

The Future Workforce in Obstetrics and Gynaecology report, published in June 2009 (<http://www.rcog.org.uk/our-profession/good-practice/medical-workforce-census>), recommended “attaining a consultant ceiling of approximately 3000 by 2016-2020” by when “retirements will level out at approximately 100 per year”. To achieve this “...factoring in competition, less-than-full-time working, emigration or attrition, we propose that the specialty training entrance target should be 150-160 per year”.

It can be seen from the data presented here that we appear to be appointing more at ST1 (216 in 2010) than was recommended in the report. This is not as clear an overproduction as it appears; many, if not most, trainees take more than seven years to complete their specialist training. The numbers alluded to in the report refer to whole-time equivalent posts and we know that most of our trainees, male and female, intend to work less than full time as consultants. On the other hand the vast majority of our new recruits into ST1 are UK graduates and therefore will not be “returning home” at the end of their training as many of our overseas trainees did, voluntarily or not, in times past.
